SUMMARY

DevOps Engineer with 4+ years of Linux systems and cloud operations experience. One of two DevOps engineers for a Germany-based e-commerce group, running production and staging workloads on AWS and GCP. Own CI/CD pipelines, RDS databases and access security end-to-end; hands-on with Kubernetes and Terraform (AI-assisted), with a background in on-prem virtualization.

SKILLS

Cloud: AWS (EC2, EBS, VPC, IAM, RDS, S3, ELB, ECR, EKS, Route 53, SSM, SES, CloudWatch, Budgets), GCP (GKE, Compute Engine, Artifact Registry), Cloudflare (DNS, WAF, Zero Trust, Workers)

CI/CD: GitHub Actions, Jenkins, SonarQube Cloud, Maven, Git

Containers & IaC: Docker, Docker Compose, Helm; Kubernetes and Terraform (hands-on, AI-assisted)

Monitoring: Site24x7, Prometheus, Grafana, Power Automate (alert routing)

Databases: PostgreSQL, MariaDB (Amazon RDS)

Systems & networking: Linux (Ubuntu, Debian), Windows Server, ZeroTier

Scripting: Bash, Python (AI-assisted)

Languages: Turkish (native), English (professional working proficiency — strong written English, developing spoken fluency)

EXPERIENCE

DevOps Engineer — Ayti.Tech (Ottoo)

Apr 2024 – Present

Türkiye · DevOps and cloud consulting for a Germany-based e-commerce group · two-person DevOps team

- Build and maintain 30+ CI/CD pipelines in GitHub Actions and Jenkins across services, making most deploys self-service for developers; fixed a slow build by adding Maven dependency caching and trimming an unused dependency.
- Run production and staging workloads on AWS and GCP: size and snapshot EC2 instances, manage VPCs and IAM policies, and track AWS Budgets to catch cost overruns early.
- Own PostgreSQL and MariaDB on Amazon RDS end-to-end, including a major-version upgrade (14 → 18) with a tested rollback and restore plan.
- Replaced long-lived production SSH keys with AWS SSM Session Manager and improved developer access practices; manage Cloudflare DNS, WAF, Zero Trust and edge TLS.
- Build monitoring dashboards and alert rules (Site24x7, Prometheus/Grafana) and route alerts to Microsoft Teams.
- Operate GKE clusters day to day; created an EKS cluster and use Terraform (AI-assisted) for infrastructure changes, working closely with a senior teammate on Kubernetes workload design.

Junior System Administrator — Dijithum

Feb 2022 – Apr 2024

Kocaeli, Türkiye · Assigned to Bilişim Vadisi (Kocaeli technology park) from Aug 2022

- Administered ~7 physical servers and roughly 50 Linux and Windows virtual machines across VMware and Xen (Bivabu Cloud).
- Helped build Bivabu Cloud, Bilişim Vadisi's private cloud platform, working with a partner firm on server setup, virtualization, and Linux image and software installs.
- Managed basic Windows Server administration (Active Directory, mail, file server) alongside Linux systems work.
- Provided systems and infrastructure support for the 42 Network coding campuses in Türkiye (100–500 users) after their IT operations moved to Bilişim Vadisi.

PROJECTS

Home lab: Self-hosted services on a home server with Docker Compose, remote access over ZeroTier, weekly restic backups with a tested restore, and local LLM inference with llama.cpp.

EDUCATION

B.Sc. Information Systems Engineering — Kocaeli University

Feb 2024

CERTIFICATIONS

Cloud Computing & DevOps Bootcamp — Ottoo Academy

Mar 2024

240-hour program: Linux administration, Git/GitHub, AWS core services, Docker and Kubernetes, CI/CD with GitHub Actions, Infrastructure as Code with Terraform
